MISSION

Design Statement

Materials

Design Statement

Stackabl turns waste into wonders by transforming regional textile offcuts and other industrial remnants into design-led lighting and furniture. Its proprietary system uses minimal processing to aggregate multiple waste streams and convert them into modular, customizable products engineered for disassembly and material recovery. Layered forms unite biodegradable wool and cork with PET, aluminum, and stone into a singular design language.
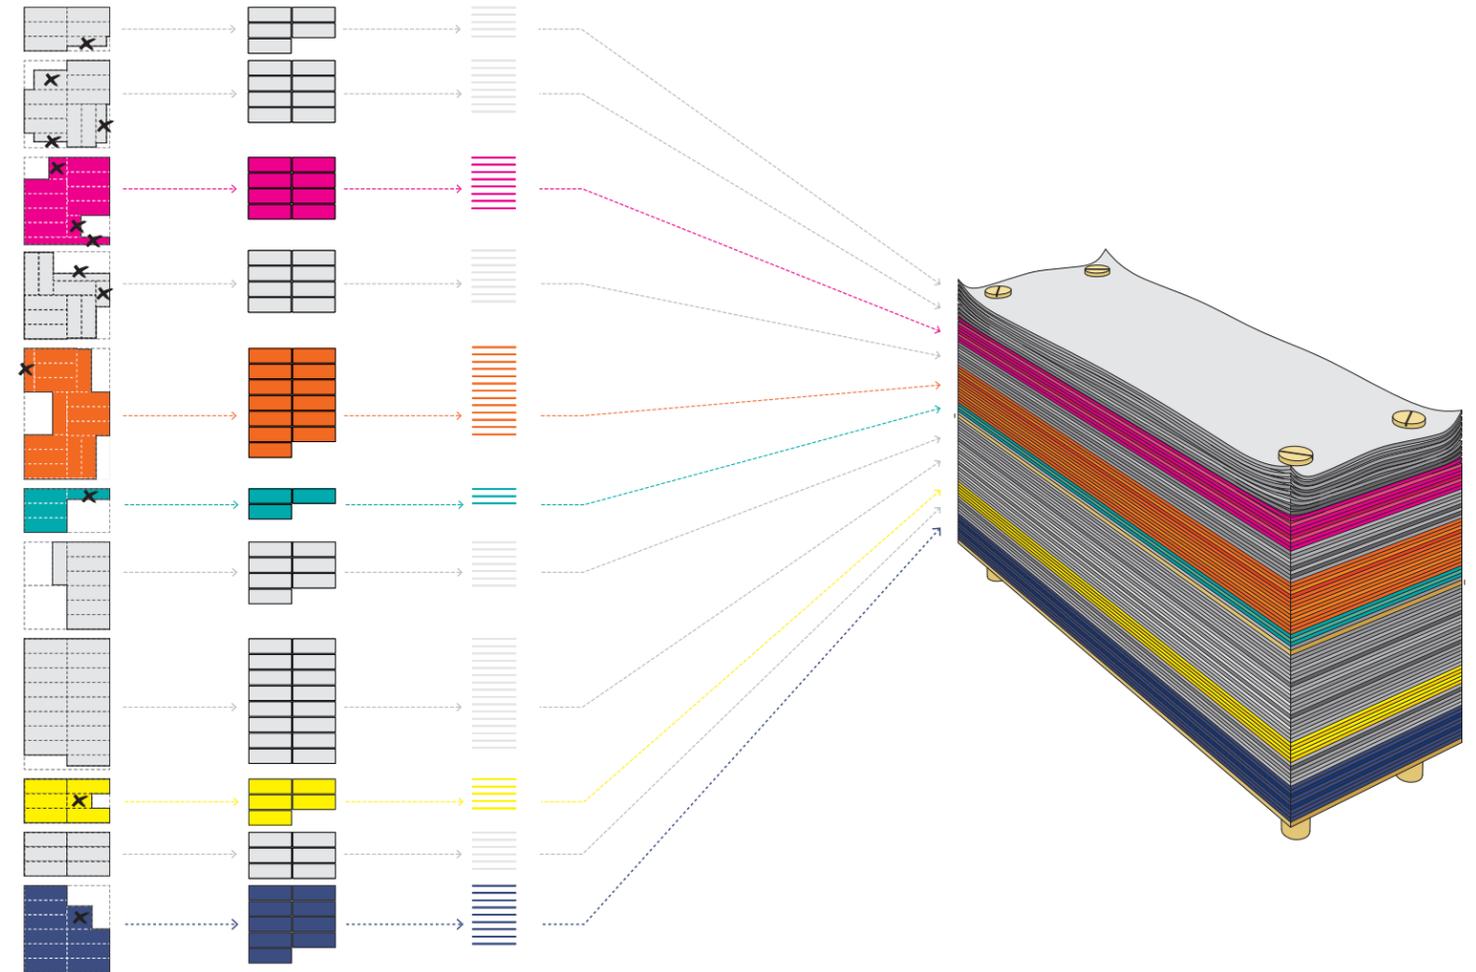

Platform Concept Diagram
© Stackabl

Design Statement

The resulting pieces are sculptural, durable, and acoustically effective for hospitality, workplace, and residential settings. Real-time specification through Stackabl's configurator and supply-chain-driven colorways keep production agile. With a commitment to divert 500 tons of textile waste by 2029, the studio offers a new model for scalable, regionally rooted circular production.

Materials

Stackabl partners with FilzFelt (a MillerKnoll company) and Sutherland Felt to source the Merino wool and PET offcuts that form the core of its furniture and lighting. The studio also works with Eurasia for post-industrial stone and Amorim for post-consumer cork wine stoppers, which become the bases that anchor its products.

CURRENT OPTIONS

Because Stackabl works exclusively with high-quality remnants from its manufacturing partners, its selection of felt, PET, and stone reflects available inventory and evolves over time. New colors and finishes are introduced as unique remnants become available.

Embedded Material Certifications

3mm and 5mm felted Merino wool

Stackabl's felted Merino wool is manufactured using solely natural ingredients, including sheep's wool, water, and plant-based textile dyes that are safely disposed of in wastewater. In addition, ten 100 percent natural colors are composed of wool and water exclusively. It also has the following qualities and certifications:

- Wool felt is 100 percent biodegradable
- 100 percent VOC free, no chemical irritants
- Oeko-Tex Standard 100 Certified Product Class II
- Living Building Challenge Criteria Compliant
- LEED MR credit 6

Embedded Material Certifications

Class C PET

Acoustic board is made with 60 percent recycled fibers. These boards not only contribute to reducing waste but are also sourced regionally, minimizing the carbon footprint associated with transportation.

- 60 percent recycled water bottle plastic

Product Certifications

EPD Ready, Verified Very Low-Carbon Performance

Stackabl's product-specific Environmental Product Declaration confirms very low embodied carbon performance relative to comparable decorative lighting fixtures with integrated LED systems. This outcome is driven by a material strategy centered on upcycled inputs and efficient, localized manufacturing, resulting in minimal embodied emissions from the product's structural and acoustic components.

As with all lighting products, integrated LED and electronic components inherently carry embodied carbon. Within this unavoidable constraint, Stackabl's system performs at the very low end of the decorative lighting category, with the majority of remaining cradle-to-gate emissions attributable to electronics rather than materials, fabrication, or assembly.

The verified EPD dataset provides transparent, third-party–reviewed environmental data and may be used to support LEED, WELL, and other performance-based sustainability pathways, positioning Stackabl as a materially efficient, low-impact option for architectural lighting applications.

Certification Support

Stackabl product materials and performance attributes can support projects in pursuing LEED and WELL credits.

They can contribute to:

LEED:

- Energy Performance
- Recycled Material Sourcing
- Material Ingredients
- Interior Lighting Quality
- Acoustic Performance
- Innovation
- Light Pollution Reduction

WELL:

- Light
- Sound
- Materials
- Innovation

*Actual points depend on project use, performance, and documentation.

Red List Compliance

Stackabl provides complete material transparency through published data sheets and can support material-health documentation as required.

CORE MATERIALS

Wool felt: Red List Approved

Cork: Red List Approved

PET: Not restricted under the Red List; full resin and additive data available

OTHER COMPONENTS

Cast acrylic (PMMA): Not a Red List polymer, compliant when free of halogenated flame retardants

Anodized aluminum: Locally anodized using non-hexavalent processes; Red List compliant

Electrical components: Some elements (wiring, PCBs, solders) may fall under LBC Temporary Exceptions.

We prioritize RoHS-compliant suppliers and can provide documentation upon request.

Lighting Acoustic Data

ACOUSTIC LIGHTING WITH REAL SOUND REDUCTION

Stackabl fixtures deliver meaningful sound absorption, from 0.19 to 3.35 sabins per piece. Even at the low end, sabin values make an audible difference, softening echo and improving clarity in residential and commercial rooms. At the high end, our fixtures perform on par with dedicated acoustic panels. Used in multiples, or paired with rugs and upholstered elements, they become a highly effective tool for reducing reverberation and improving overall comfort.

Because our system also provides functional lighting and customizable color, designers can address acoustics, illumination, and visual identity with one solution. Budgets can be shared across lighting, acoustics, and even art in some cases, giving specifiers maximum flexibility.

Care and Maintenance

STACKABL

TEXTILE

Lint roll occasionally to remove general air-borne debris. Should soiling occur, spot clean with mild soap and lukewarm water. Avoid aggressive rubbing as this can continue the felting process and change the surface appearance of the felt.

ALUMINUM, ACRYLIC, AND STONE

Wipe occasionally to remove general air-borne debris. Should soiling occur, clean gently with an ammonia-free glass cleaner.

Warranty Coverage

STACKABL

COVERAGE

Stackabl provides a limited three-year warranty to the original purchaser. It covers defects in material and workmanship under normal household use. The warranty is not transferable.

NOT COVERED

- Improper installation or assembly
- Natural variations in color, finish, or materials
- Fading from sunlight
- Weather exposure or improper environment
- Normal wear and tear or patina changes
- Cuts, scratches, or surface damage
- Damage from negligence, improper cleaning, misuse, accident, or commercial use
- Costs related to installation, removal, packing, or shipping
- Variations in size or materials inherent to our process

SERVICE

To request service, contact Stackabl via our website, email, or phone and provide proof of purchase. Stackabl will determine whether to repair, replace, or provide a substitute for any eligible item.

LEGAL

This warranty replaces all other warranties. Implied warranties are limited to three years. Remedies are limited to repair or replacement. Incidental or consequential damages are not covered. Rights may vary by state.

SAFETY INSTRUCTIONS:

Follow instructions carefully, failure to do so will void warranty.
This product is to be installed by a qualified electrician only.
Ensure installation complies with local law and applicable standards.

ELECTRICAL INFORMATION:

Input voltage: 100-120 VAC

IP rating: IP20 - for indoor use only

Ensure main output is surge protected.

Never make connections while power is connected.
Do not make modifications or alter the product.

Keep luminaire and connections clean and free of debris or moisture.

It is the installer's responsibility that the installation is adequately sealed to avoid moisture ingress.

Caution must be taken when removing the fixture from packaging and shipping box. Ensure individual light discs and layers do not spin when handling and installing fixture.

Please refer to installation guide for correct use of hanging hardware
