

Column

Unpack your Column and set it where you'd like it. Your touch point is the metal disc set into the felt stack at roughly waist height — you'll feel it standing about 1/8" proud of the felt. Plug the included USB-C adapter into a wall outlet, connect the included cable to the adapter, then plug the other end into the USB-C port in the felt stack near the base of the lamp. Leave the disc alone while you're connecting power. The lamp comes on at the brightness it was last set to — 50% out of the box — and that's setup done. A light tap on the disc turns it off, and another turns it back on. Touch and hold to bring the brightness up, letting go when you like the level; the lamp flashes when it reaches full. Hold again to bring it down, and it flashes once more at the low end of the range. Your lamp remembers its brightness, so it returns to the level you left it at — after switching off, and after a power outage. If anything ever seems out of sorts, unplug the lamp and plug it back in.

NOTES

- The included USB-C adapter and cable are provided for powering your lamp only. Using them for any other purpose may void the warranty.
- The included adapter is USB-C PD, 12V / 3A. Any replacement must match that specification or the lamp will not operate.
